

Did You Know?

Revision Surgery

Even after previous surgery, lasting pain or limited mobility doesn't have to be permanent. Revision surgery can address failed implants, nonunions, or chronic pain—restoring comfort, alignment, and function.

Revision Ankle Fusion: Pre-Op & 1 Year Post-Op Lateral

Are You Experiencing?

**Persistent pain
after previous foot
or ankle surgery**

**Hardware
irritation or
implant failure**

**Deformity,
imbalance, or
instability after
surgery**

**Difficulty walking
or returning to
daily activities**

Our Solutions Include:

Complex Revision & Reconstructive Surgery: Correcting failed fusions, fractures, or implants with advanced techniques.

Bone Grafting & Biologic Augmentation: Enhancing bone healing and structural stability.

Deformity Correction & Realignment: Restoring balance, stability, and natural motion.

Limb Salvage Expertise: Preventing amputation through targeted reconstruction when previous surgeries fail.

Hardware Removal & Replacement: Addressing pain or complications from prior implants.

Personalized Recovery Planning: Tailored rehabilitation to optimize healing and long-term outcomes.
